Shortcut key for chrome incognito

How to create a shortcut for chrome incognito. Shortcut key for incognito window in chrome. How to make chrome shortcut incognito. What is the shortcut key for incognito. How to open chrome in incognito mode shortcut.

For those who regularly use a private window while browsing most likely to open that window manually. But, what if we have a shortcut that allows us to quickly start an unknown window without visiting the main window? It turns out that, it's not. With a simple trick, you can create a link from Google Chrome unknown that you can put on the desktop. It is very comfortable, fast and third-party applications are not required. Discover the guide below! How to create a link 1. Right-click on the desktop, go to New> Connection. 2. Copy and paste the following link, then click Next. For 32-bit Windows: "% Programs% Google Chrome Application Chrome.exe" -Incognito for 64-bit Windows: "% ProgramFiles (X86)% Google Chrome Application chrome.exe" -Incognito 3 . Give a name to the new link. For example, a chrome unknown ¢, then click Finish. 4. Now, the link has created. 5. Double-click it to see if it works. How to change incognito icon This is just a suggestion. You wona change the main features. However, replacing its icon, will give a signal that you are going to use the unknown navigation mode, rather than a normal window. It is very useful anyway. 1. Click the link, select Properties. 2. Click Edit Icon | 3. Select the incognito navigation icon after that, click OK. Feel free to change it with the icon you want. 4. Now unknown Chrome seems more relevant. It is also possible to attach the shortcut to support application and startup bar menu. The shortcut directory can be changed to automatically visit a certain page at the time of launch. Look at the example below. "% ProgramFiles (X86)% Google Chrome Application chrome.exe" -Incognito www.asapguide.com is fine. This to. No necessary extension. With the unknown navigation window, you can browse without cache, cookies, chronology, and site data. This page is for people who do not want to delete the cache of their browser, but they still want to experience a "clean" browser. This can also be useful if you are having access problems with Balsamiq Cloud. Apple Safari Google Chrome Mozilla Firefox Microsoft Edge Apple Safarito Open a private browser window in Safari, go to the File menu and select New Private Window. You can also use the shift keyboard + Å "~ + N. Google Chromeheads Up: Google calls their" unknown "private navigation mode to open an unknown window in Chrome, open the Chrome menu in the upper corner To the right of the browser window and select new unknown window.
