Troy bilt storm 2410 user manual

Complete contact information of the Troy-Bilt customer service, including steps to reach representatives, hours of operation, customer support links and much more from ContactHelp.com. · Discussion start · #1 · Jan 13, 2018 Anyone who knows the approximate amount of oil (in terms of ounces) that Troybilt 2410 takes in · Oil Recommendations Before starting the engine, filling with engine oil, the capacity is 600 ml/20 oz. Refer to the chart of viscosity (Figure 3-1) for oil recommendations. Don't fill too much. Use a 4-time, or a high equivalent cleaner, premium quality engine oil certified to meet or exceed the requirements of the U.S. automotive manufacturer for the classification of the service of a minimum SJ level (higher letters ratings are acceptable as SL and SM degrees). The engine oil will show this designation on the container. Link to the owner's manual: 2-Stage Snow Thrower | Storm 2410 Snow Thrower from Troy-Bilt · Discussion Starter · #3 · Jan 13, 2018 · 0w30 synthetic is easier to start. It does not thicken in the cold of the extremity. The brand doesn't care to buy the cheapest. · Print the owner's manual if you get a chance, a lot of maintenance information that if executed can save the pain. Ex. lubricate the hexagonal shaft, etc. 98% of people never make it end up repairing there machine and still do not know how to do it or because speeds work fun... The Troy-Bilt Storm 2410 is a two-stage snow generator at affordable prices that makes the dagger. Its high brands received in all publications of the sector and marked well in ConsumerTest. With features that match its highest price competitors, it is one of the best deals in progress. 4 cylinder engine OHV 208cc The Storm 2410 is powered by a 4 cycle engine OHV 208cc. Estimated around 9.5 ft/lbs of couple and under 7hp. There is no mixing of gas and oil. While this is the lowest power that I would go on a two-stage stadium, he packs a decent punch for his size. The Troy-Bilt engines are made by MTD. While MTD is based in Ohio, engines are manufactured in China. While MTD is not on top of my list, I find their engines to be reliable, efficient and quiet. This particular motor will hold well with proper maintenance. MTD also makes small engines for Cub Cadet and Yard-Machines. 12 inch tightened steel Auger With a 24-inch clearance path and 21-inch intake, the Storm 2410 is built to manage snow up to 16 inches high. It works great on snow drifts and can cut piles at the end of the driveway with a little patience. The reinforced steel housing provides some extra resilience from ice and rocks that are captured in the machine. A 12 inch serrated steel auger helps break the ice and the heaviest snow. This is a different design than the Briggs & Stratton snow shredder auger. It feels like thicker snow is rotated through a number of times until it is broken enough to throw efficiently. A really nice design by Troy-Bilt. You should get 25-30 feet throw away in the best conditions. Around 15 feet with soft and wet snow. Auger works well can be safely used on gravel surfaces (after adjusting the height of ski shoes correctly). Reversible shoes are a deluxe polymer to avoid soft. There are two extra pins for shears. Self-propelled guide (6 forwards and 1 reverse speed) Pushing the snow blower 186 pounds is easy with self-propelled drive system. There are 6 ahead and 2 reverse speeds. The second reverse speed is a nice addition like other brands with only one tend to be too slow. The 13-inch X-trac tires provide a nice traction. This makes it easier to drive on frozen surfaces and maneuver the steepest slopes. Good management Despite the lack of power steering The storm of Troy-Bilt 2410 feels lighter in use than it really is. I'm always worried about the heavier units not having power steering, but you really don't need it in this case. It is easy to make a 180 degree turn with minimal effort. If the servosterzo is a must, the Husqvarna ST224P could be a good alternative. The individual handles are beautiful and I prefer them over traditional handlebars. They make curves and backup in and out of points easier. Unfortunately, there is no single hand control on this model which is a bit deluting. Keeping down the Auger and turning the spindle at the same time is difficult. Distance chute The exhaust spindle can be remotely controlled and has a rotation radius of 180°. This is handled with a crank that for most is well. Can stiffen and you might want to use some lubricants smoother operation. independently, at this price, is more than adequate, a heavy plastic is the slide, its well built and should keep up in time. My only minor grip is high. Could be a little higher to avoid the blow in the windy days. button electric start button for start in the extreme cold, Troy-Bilt put an electric push-button on the machine, just connect the snow fan in a socket and press the start button to go. you can also use the traditional recoil cable. Troy-Bilt does not include extension cable. at a budget price, 2410 does not have additional bells and whistles. There are no heated handlebars or headlights. What conditions is the best Troy-Bilt Storm 2410 for? This snow sweep is built for regions that get moderate snowfall. This includes much of the midwest and parts of the eastern coast that receive less than 45 inches per year. people in the snowy areas will need something more powerful, a standard 2-car driveway is ideal for 2410. works well on flat, irregular and tilted surfaces. with the correct skid adjustments, you can use it on gravel or grass too. Troy-Bilt warranty offers a limited 2-year warranty. repairs must be carried out by an authorized Troy-Bilt service provider. conclusion the storm of Troy-Bilt 2410 is my #1 two-stage snow fan. its well-built and sufficient for most areas of the United States. at this price, it gives you a self-propelled guide and good management. the engine is not for a two stages, but can still manage some heavy storms with patience. This is a car that should cost \$100 more than he does. If you're trying to save money and you don't care about things like heated handlebars, this is a perfect choice. Features: Brand: Troy-Bilt Model: 31AS6BN2723 (Operator Manual [PDF]) Stadium type: Two-stage gas engine: 208cc 4-Cycle Fuel capacity: 0.5 gallons Dazzle capacity: Unknown Compensation Width: 24 inches Suction Height: 21 inches Shooting distance: 30 feet Pneumatic: 13 inches Weight: 186 pounds Warranty: Limited 2-year features: Starting method: Coating and electric speeds: 6 forward and 2 reverse power steering: No Chute Regulation: Distance rotation screen (180°) Light: Without heated handles: No.
