The clutch is the main part that must be replaced, but the models that have been well maintained and not driven too aggressively can go about 100,000 miles before repairing the clutch. Another more than a manual vehicle is that it forces you to pay close attention to driving due to having to move consistently. In an era of smartphone, Bluetooth, Bluetooth, Other distractions, this can be invaluable for some people. The manuals also give the driver the most direct vehicle control for those who want it, allowing you to move only when you want to do it. So.
