Surely the most common way of coding a message is to choose the most appropriate words for the listener or reader. In the case of Hamlet, he didn't like what he read that he described it in an elementary way, as simple words, rather than a message. So I thought I'd give a little ink to the words themselves. The words "Nym" have specific meanings that end in nym describe classes of words. Some of the most used words are synonymous (equal media); antonym (meaning the opposite); the same sound; and acronym (a word derived from the first letters of a more complex term, such as SCUBA or AIDS). Homo means "same", hetero means "different". Therefore, if there are omonyms, it is right that there are also etheronimas. While the homones have the same sound but different ornaments (such as couple and pear), the etherons are written the same but have different meanings and, often, pronunciation: a sewing person is a sewer, but a deposit for waste products is a sewer. Sewer, then, is an etheronim. But the lexicon of nymphs doesn't end here. One of the sites I visited recently2 lists no less than 26 words, many of which are quite arcane and of interest to relatively few. Some are really funny. Do we really need a word to say another word of two identical parts? If so, then tutu, pawpaw, yo-yo, and bye-bye are tautonyms. A couple of weeks ago, my son asked me what a metonym means. I didn't know, so we looked up. In retrospective, I should have been able to logic out, as "meta" means change. A metonym is a word that designates something from a word that is associated with it. For example, Hollywood is a metonym used to indicate the US film industry, while the Crown refers to royalty, and the bottle refers to alcohol. My use of the expression "a little ink" a couple of paragraphs back is also a metonym for written communication, even when it is not involved in real ink or writing on paper. The point of all this has to do precisely in the use of our language. It won't do me well to code a message using a word like metonym, or etheronimo, or tautonym, unless I'm sure that my listeners (or readers) know its meaning. Or this, or I am ready to add the definition for their benefit, in such case I may have just used the definition first. However, learning the correct use of words, however arcane, can be useful, and if you like the words themselves, even fun. What's your Godfather? In his book "The Half Life of Facts: because all we know has an expiration date," Samuel Arbesman3 discusses changes in the language that occur over time, and the two fields that seePhenomenon differently. He explains the prescriptive grammars like those who focus on the way in which words should be used, and descriptive grammars like those who are more interested in the way they are actually used. Arbesman states that The individual develops his set of rules on how to use words, and that all of us "you, me and all the others" have our personal idioletto. This delightful term describes our unique language and our speech model, as determined by what we have learned when we were young, as well as those around us, and includes our grammar, vocabulary, word pronunciation, and also Our accent. There is an important lesson here. If we really want to communicate effectively, we need to be aware that every time we encourage a message, someone whose idioletto is significantly different from ours can most likely decode it so as to obtain a completely different message. So you pay to be careful about our choice of words; It's really a message, or just â € œParole, words, wordsâ €? Â © 2013 Ken Michaels. All rights reserved.
