Test: Adjectives With Prepositions

Underline the correct preposition:

1. Linda is afraid ____ snakes.
a) at b) of c) with

2. I'm angry ____ my brother Tom.
a) with b) at c) of

3. Pam is anxious ____ her exams.
a) of b) about c) for

4. He is interested ____ history.
a) at b) on c) in

5. Ben is keen ____ sports.
a) in b) on c) with

6. She is ashamed ____ her words.
a) of b) with c) at

7. Bill is bad ____ maths.
a) in b) at c) with

8. I'm bored ____ physics.
a) at b) in c) with

9. Linda is good ____ English.
a) at b) in c) with

10. Pam is famous ____ her poems.
a) at b) for c) with

11. Tim is fond ____ reading books.
a) in b) at c) of

12. You're late ____ school today.
a) for b) at c) in

13. I'm excited ____ my next trip.
a) about b) with c) at

14. Your cap is different ____ mine.
a) with b) at c) from

15. Sam is nervous ____ his test.
a) about b) with c) at

16. He is happy ____ going there.
a) with b) to c) about

17. He is proud ____ his sister.
a) with b) of c) at

18. I'm tired ____ cleaning the room.
a) of b) with c) at

19. Pam is worried ____ her dog.
a) at b) about c) with

20. I was surprised ____ this news.
a) by b) with c) from

21. She is responsible _ the flowers.
a) at b) with c) for

22. He's accused _ stealing money.
a) of b) with c) at

23. We were shocked _ the tragedy.
a) at b) with c) by

24. I'm guilty _ telling her lies.
a) about b) for c) with

25. He's capable _ repairing the TV.
a) with b) of c) for

26. The room was full _ people.
a) of b) with c) at

27. I was involved ____ that project.
a) with b) in c) by

28. We're accustomed _ loud music.
a) with b) at c) to

29. What are you worried ____?
a) about b) of c) with

30. We're aware _ the conference.
a) with b) of c) by

31. I'm pleased _ winning the game.
a) about b) at c) in

32. He was amazed _ my progress.
a) in b) for c) by

33. I'm disappointed _ my results.
a) with b) at c) by

34. She's happy ____ her progress in physics.
a) at b) about c) with

Winter Multiplication Worksheets

Part A: Read.

This is May. She's ten years old. She's tall and thin.
She's got long brown hair. She's got brown eyes.
She can sing and dance. She can't swim.

Every Monday, May reads Chinese books with her friends.
Every Tuesday, she rides a bike to school. On
Wednesdays, she plays music at school. On Thursdays, she
sings English songs with her friends. Every Friday, she
cooks eggs at home.

Part B: Write the day please.

Part C: True or False.

1. May reads Chinese books. _____
2. May rides a bike to school on Fridays. _____
3. She plays music at home. _____
4. She plays music at school on Wednesdays. _____
5. She cooks pizza. _____

Part D: Please answer Yes or No.

1. Does May ride a bike on Mondays? _____, _____, _____
2. Does May sing English songs? _____, _____, _____
3. Does May cook on Fridays? _____, _____, _____
4. Does she play music on Wednesdays? _____, _____, _____
5. Does May read Chinese books on Tuesdays? _____, _____, _____

Reading Passages

In Serbian

Na izletu.

Danas je lepo vreme.
Na izletu. Mama je
sok od pomorandje
njam. Crvene jabuke
Reksa. Reks je brz.

Na plaži

Danas je sunčan dan. Sara je na plaži.
More je plave boje. Sara nosi roze haljinu, žuti
šešir i zelene sandale. Sara ne zna da pliva. Ona
se uvek igra u pesku. Danas, Sara pravi veliku
kulu od peska.

Odgovori na pitanja

1. Kakav je danas dan ?

2. Gde je Sara ?

3. Da li Sara zna da pliva ?

4. Šta Sara pravi ?

Free multiple intelligence test printable. Free printable multiple intelligence test for students.

CCO/Belova59/Pixabay If you ever got the results of the laboratory test, and were left confused by all the strange medical jargon, you are not alone. Don't worry, though, you can become literate in the test results. This guide will help you better understand the basic definitions and get a sense of how information on a typical relationship is organized and presented, allowing you to interpret the test results with confidence. Complete blood count The complete blood count (CBC) focuses on the health of three types of blood cells; red blood cells, white blood cells and platelets. This screening tool helps your doctor to identify allergies and infections, or to diagnose potential diseases and conditions such as anaemia and leukaemia. White blood cells, also called leukocytes, are an important part of the body's immune system. Your body produces more white blood cells if you have an allergic reaction or an infection. Red blood cells (RBC) red blood cells provide oxygen to tissues throughout the body. A high RBC count can be the result of kidney problems, a heart condition, or dehydration. Low RBC counts may indicate nutritional deficiency, bone marrow damage, kidney problems or anaemia. Emoglobin, Ematocrito, Mean Body Value (MCV), Mean Body Emoglobin (MCH) These blood test results often appear under the RBC section, because © further examine the function and health of your RBCs. Haemoglobin is measured to help determine whether your organs and tissues are receiving enough oxygen. Haematocrit results show the volume of blood absorbed by RBCs. This helps to determine whether you have too high or too low a number of red blood cells. Blood cells are often referred to as corpuscles, and the mean corpuscular value measures the mean size of RBCs. The red cells of size may indicate a vitamin B12 deficiency or anaemia. Medium corpuscular haemoglobin measures the average amount of haemoglobin within red blood cells. It is often assessed together with average body haemoglobin (MCHC), which measures the average percentage of haemoglobin in red blood cells. Platelets and Mean Platelet Value (MPV) Platelets are fragments of blood cells. The low platelet count may indicate the risk of excessive bleeding, while the high platelet count may indicate the risk of blood clots. The MVP test measures the average amount of platelets and can reveal subtle disturbances when the platelet count is normal. The results of this five type of white blood cells should be under the list of RBC results. The health and quantity of these cells are useful to identify allergies and infections. For example, basophils have small particles with enzymes released during asthma or an allergic reaction. Complete Metabolic Panel (CMP) This test group provides a broad picture of the body (chemical balance and metabolism, in addition to providing information on its electrolytes. Tested common electrolytes are calcium, chloride, phosphorus, magnesium, sodium and potassium. CMP often measures chemicals and substances such as albumin, bilirubin and creatinine. Too much bilirubin may indicate jaundice, while low levels of albumin may or indicate inflammation, malnutrition and liver or kidney disease. High levels of creatinine may indicate poor renal function. The fasting glucose test is another part of the CMP test and abnormal glucose levels may be a sign of diabetes. BEFORE QUESTIONS ANSWERED. NET The Wechsler Intelligence Scale for Children (WISC) is an intelligence test that determines a single child (194; 160; IQ, or intelligence ratio. It was developed by Dr. David Wechsler (1896-1981), who was the head psychologist of the New York City Bellevue psychiatric hospital. The test that is normally given today is the review of the 2014 of the test originally conceived in the 1949. It is known as WISC-V. of the years, the WISC test has been updated several times, each time the name that represents the true edition of the test. Sometimes some institutions still use older versions of the test. In the last WISC-V, there are new and separate scores of Visual Spatial and Fluid Rating Index, as well as 160; new measures of the following abilities: Visual-space sensitisation of fluids Quantitative-Working Visual-Sensitization Rapid Automated Visual Storage name/name associative visual-verbal memory facility Dr. Wechsler has developed two other commonly used intelligence tests: the Adult Intelligence Scale Wechsler (WAIS) and Wechsler Preschool and Primary Intelligence Scale (WPSI). The WPSI test is designed to evaluate children from three to seven years and three months old. The WISC is essentially a point of strength and intellectual weakness of students and provides a vision of their global cognitive capacities and potentials. The test also compares children with contemporaries of a similar age. In more general terms, the goal is to determine the potential for a child to collect new information. Although this assessment can be a great predictor of potential, the level of IQ is in no way a guarantee of success or failure. Private schools serving children in 4th and 9th grades often use WISC-V as part of the admission test procedures, which may be substituted for or in addition to other admission tests such as SSAT. The private schools that use it do so to determine both the intelligence of a child and his performance in the school compared to that level of intelligence. WISC determines the intellectual abilities of a child. It is often used to diagnose learning differences as 160; ADD or ADHD. The test also helps to evaluate the strengths in order to determine them. 194; 160? gifted children. The WISC test indices are verbal understanding, perceptual reasoning, work memory and of processing. The subtleties allow you to precisely shape a child's intellectual abilities and to be ready for learning. Pearson Education, a company that sells Wechsler test products, also scores test. The clinical data that the tests provide help the personal admissions to develop a complete understanding of your child's intellectual strengths and weaknesses. However, the wide range of ratings can be daunting for many and difficult to understand. Not only do school officials like teachers and admission representatives need to understand these reports and what scores mean, but also parents. Secondo According to the Pearson Education website, there are options for the rating reporting type available for the WISC-V, which will provide a narrative explanation of scores, including (the following bullet points are quoted from the website): narrow file synthesis back background, history, and test behaviors Interpretation of the full intellectual quotient and of all primary, auxiliary and complementary scores Index Integration of the reason for referencing in test scores Interpretative recommendations based on WISC & V Optional Performance Summary Report Your child cannot prepare for WISC-V or other intellectual quotient testing by studying or reading. These tests are not designed for testing are what you know or what you know, but rather, they are designed to determine the tester's ability to learn. Typically, tests such as WISC consist of tasks that evaluate different intelligence measures, including spatial recognition, analytical thinking, mathematical skill and even short-term memory. As such, make sure your son has plenty of rest and relaxation before testing. The school is used to administer these tests and will instruct your child on what to do at the appropriate time.
