Statistical Data Analysis using R

An Introduction

During the 19th century, the British Empire expanded rapidly, becoming the largest in the world. This expansion was driven by a combination of factors, including industrialization, technological advancements, and a desire for raw materials and markets. The British Empire's influence extended across continents, with colonies in North America, South America, Africa, Asia, and Oceania. The empire's power was often maintained through military force, and it played a significant role in the global economy, particularly through its control of the British pound and its role as a major center of finance and trade.

Data analysis using r and the r commander pd

So have you read your data in an object R. Now, what? Examine your data object Before you start analyzing, you may want to take a look at the structure of your data object and some row entrances. If it is a 2-dimensional data table stored in an R data frame object with rows and columns, one of the most common structures that you are likely to find here are some ideas. Many of these also work in 1-dimensional vectors also. Many of the continuation commands assume that their data is stored in a variable called MyData (and not that MyData is somehow part of the names of these functions). [This story is part of "Guide for beginners for R." of ComputerWorld to read from the beginning, review the introduction; There are links on that page to the other pieces of the series.] If you type: Head (MyData) R will show the headers of the MyData column and the first 6 rows by default. Do you want to see, Oh, the first 10 rows instead of 6? That's: Head (MyData, N = 10) or simply: Head (MyData,10) Note: If your object is just a number: 1 dimensional numbers, such as (1, 1, 2, 3, 5, 8, 13, 21, 34), Head (MyData) will give you the first 6 articles in the vector. To see the latest rows of your data, use the queue function (): Tail (MyData) or: Tail (MyData, 10) The queue can be useful when there is read data from an external source, which helps to see if something was confusing (or there was a row of the note at the end at the end he did not notice). To see it quickly how its object is structured, you can use the STR (): STR (MyData) function, this will tell you the type of object you have; In the case of a data frame, it will also indicate how many rows (observations in R-Speak) and columns (variables in R) contains together with the type of data in each column and the first entries in each One column. Results of the STR () function in the sample sample data set. For vector, STR () tells you how many articles there are, for 8 articles, it will be displayed as [1: 8], along with the type of element (number, character, etc.) and the first few few. Other data types return slightly different results. The first in our Data Science Professional Certificate Program, this course will introduce you to the basics of R programming. You can better retain R when you learn it to solve a specific problem, so you will use a real-world data set about crime in the United States. You will learn the skills needed to answer essential questions about the differences in crime in different states. We will cover the functions and data types of R, then discuss how to operate on vectors and when to use advanced functions such as classification. You will learn how to apply general programming functions such as "IF-MOSS", and "for loop commands", and how to read, analyze and visualize data. Instead of covering every R skill you may need, it will build a solid foundation to prepare you for the deeper courses in the series, where we cover concepts such as probability, inference, feedback, and machine learning. We help you develop a set of skills that includes R programming, data is twisted with DPLYR, data visualization with GGPLOT2, file organization with UNIX/Linux, version control with GIT and GitHub, and reproducible document preparation with Rstudio. The demand from science professionals for skilled data is growing rapidly, and this series prepares you to tackle the challenges of real-world data analytics. Institution: HARVARDX SUPJECT: Data Analysis and Statistics: Introductory Prerequisites: An updated browser is recommended to allow programming directly into programming in a browser-based interface. Language: English Transcript: Enrolled in Associated Programs: Professional Certificate in Data Sciences Basic R Syntax Foundation R Data Programming Concepts, Data Types, Arithmetic Vectors and How to perform operations in R, including the classification, Data Wrangling using DPLYR, and the creation of the honor code declaration. Harvardx requires people who register in their courses in EDX to meet the terms of the honor code of EDX. Harvardx will take appropriate appropriate Action in response to violations of the EDX Code of Honor, which may include dismissal from the Harvardx course; revocation of any certificate received for the Harvardx course; or other remedies as circumstances warrant. No refunds will be issued in the case of corrective action for such violations. Affiliates who are taking Harvardx courses, as part of another program, will also be governed by the academic policies of those programs. Declaration of Research by registering as an online apprentice in our Open Online Courses, you are also participating in research aimed at improving Harvardx's instruction offerings, as well as the quality of learning and related sciences around the world. In the interest of research, you may be exposed to some variations in course materials. Harvardx does not use trainee data for any purpose beyond the university's stated educational and research missions. For research purposes, we may share information that we collect from online learning activities, including personal identification information, with researchers beyond Harvard. However, your personally identifiable information will only be shared as permitted by applicable law, will be limited to what is necessary to conduct the investigation, and will be subject to a data protection agreement. We may also share with aggregated public or third party information that does not personally identify you. Similarly, any research findings will be reported at the aggregate level and will not expose your personal identity. Please read the EDX Privacy Policy for more information about the processing, transmission and use of data collected through the EDX platform. Declaration of Non-Discrimination / Anti-Harassment Harvard University and Harvardx commit to maintaining a educational and safe and healthy work environment. The member of the Community is excluded from participation, denied the benefits of, or are subjected to discrimination or harassment in our program. All members of the The community is expected to comply with Harvard's policies on non-discrimination, including sexual harassment and the EDX Terms of Service. If you have any questions or concerns, please contact Harvardx@harvard.edu and/or report your experience through the EDX contact form.
