The Greek root histo can be translated as either "tissue" or "web" and both translations are appropriate because most tissues are webs of interwoven filaments and fibers, both cellular and noncellular, with membranous linings. Histology involves all aspects of tissue biology, with the focus on how cells' structure and arrangement optimize functions specific to each organ."For more than four decades, Junqueira's basic histology has built a global reputation as the most accessible, yet comprehensible overview of human tissue structure and function available.
