You want to transfer data from your old Nintendo Switch system to a new one, but you're not sure where to start. Don't worry, we've got you covered! Let's break it down into a few easy steps. First, make sure both systems are updated to the latest firmware and that you have enough storage space available on your new console. Next, if you want to transfer all of your data from one system to another, select "System Settings" > "Users" > "Transfer Your User Data." Make sure to choose the correct console as the source or target. If you only want to transfer a specific save data file, follow these steps: From the HOME Menu, select "System Settings" > "Data Management" > "Transfer Your Save Data." We'll also cover how to transfer your games from one system to another and some extra tips for getting started. To transfer your save data from one Nintendo Switch console to another for Pokémon Sword and Shield, follow these steps: First, ensure both consoles are linked to the same Nintendo Account. Then, prepare both consoles by closing any games in progress and accessing the Home Menu. On the original console, select the game's icon, tap the + button, navigate to Options, and choose Transfer Your Save Data. Next, on the original console, select Send Save Data to Another Console, and then receive the data on the destination console, selecting Receive Save Data when prompted. If you already have a save file in place, be aware that transferring the data will overwrite it and cannot be recovered. If you're planning to trade-in your Switch for a new OLED model, it's crucial to consider how you'll transfer your Pokémon save data from one console to another. The system itself stores save data tied to the user profile. Signing in to another system won't automatically carry over save data. Before making the switch, get Pokemon Home on your current Switch and upload everything you want to keep, or transfer your save data to another Switch if you have multiple consoles already. Keep in mind that save data can only be transferred via a system transfer with the new console. This will overwrite any existing save file on the receiver Switch, and those saves cannot be recovered. To transfer save data from one Nintendo Switch console to another for Pokémon Sword and Shield, follow these steps: First, prepare both consoles by closing the game and going to the Home Menu on each device. Then, select the user with the Save File you want to transfer to the other console. On the sender's console, go to the Manage Software tab, then select Transfer Your Save Data. On the receiver's console, select Send Save Data to Another Console, then Receive Save Data. Next, confirm that the two consoles are linked to the same Nintendo Account and have an active Internet Connection required for transfer. Finally, if a warning message appears indicating that transferring data will overwrite existing save data on the receiver console, select OK to complete the transfer process. Note: Only one Save File is allowed per Switch profile, so be cautious not to overwrite existing save data.To switch your Pokémon Scarlet and Violet save file to another console, initiate the transfer process by selecting "Send Save Data" from the console you're moving it from. This will start the transfer to the receiving Switch. On the receiver Switch, choose "Receive Save Data". If you already have a saved game on the receiving Switch, be aware that transferring data will overwrite any existing save and cannot be recovered. To proceed, confirm with OK. A stable internet connection is necessary for this process, as well as both consoles being linked to the same Nintendo Account. Note that Pokémon Sword and Shield do not support cloud saves.
