This thread was marked as Locked by master801. Hello everyone, i'm here to show you a problem that i have been facing for a while, and to show you how to fix it. Lets get started. I will be using minecraft_server.rar as an example. 1. Change the .rar in minecraft_server.rar into .jar It should look like this now, minecraft_server.jar If it doesn't convert back into a .jar file, proceed to next step 2. Go to windows search bar and type in, "Folder options" Click on it and click on "view" Next scroll till you see "Hide extensions for known file types" and Uncheck it. Now go back to step one and it should convert. If it doesn't, go to next step 3.Right click on minecraft_server.rar and click, "Open with" and choose default program. You should see "Java" or "Java™ Platform SE Binary" on recommended program. If you don't, go to "browse" then "computer" and at the search bar type in, "Java" and click on the first "Java.exe" Now repeat step 1. If you have some remote access ability, I could take a look for you. Likely there is just something simple being overlooked that would be become obvious once I could actually see the system, Skype screen share, Teamviewer, etc. Reddit and its partners use cookies and similar technologies to provide you with a better experience. Java News Rules Forum Chat Mods Maps Resource Packs MC Station Desktop View Run the server.jar with a start.bat Minecraft 1.17 requires Java 16: Use the "Windows x64 Installer" Create a new folder "server" Put the server.jar in it Create a text file "eula.txt" and paste eula=true Create another text file and paste "C:\Program Files\Java\jdk-16.0.1\bin\javaw.exe" -Xmx1024M -Xms1024M -jar server.jar pause Save it and rename the file from "New Document.txt" to "start.bat" Start the server with the start.bat Don't you have to tell it where your server.jar is? The system should know what to do with a jar file (Run it from Java as long as Java is installed correctly) but you need to tell it where the jar is that you're running. Something like: java -Xmx2048M -Xms2048M -jar C:\Users\User\AppData\Roaming\.minecraft\server.jar nogui Either that or change to the directory that contains your server.jar and run it from there, if you're using a bat file, save the bat file in the same folder as the server.jar and I think that would work too. If the bat file is being run from the same folder as the jar file, then it could be the old "Java can't read special characters in a folder name" problem and you'd have to rename the user folder or relocate your Minecraft install folder.
