And it also won't help evade government censorship or network blocks that prevent you from watching your favorite shows and using essential online services. CyberGhost VPN is a comprehensive VPN service that you can use on Windows and other internet devices. Encrypt your connection to avoid scanning, change your location, and bypass censorship 100% anonymously. Get CyberGhost VPN for Windows Your ultimate VPN solution No matter if you have a branded notebook or a home PC: CyberGhost VPN is compatible with: Windows Vista (SP2 minimum) Windows 7 (SP2 minimum) Windows 8Windows 8.1 Windows 10 System requirements: PC compatible with .NET 4.6 32-bit processor 1 GHz (x86) or 64-bit (x64) 2 Gigabyte ram (depending on the Windows operating system running) Free space on 310 MB (280 MB less hard disk if Microsoft .NET 4.6 is already installed) All 32-bit and 64-bit operating systems, Compatible with Windows and not only If you have Linux and macOS devices at home, do not worry, we also provide them with apps! A CyberGhost VPN subscription protects up to 7 devices at the same time. Make sure you download the app on your Phone or Android as well. Mobile devices are even more vulnerable to attacks. Better yet, install CyberGhost on your router to protect everyone and everyone who has access to your Wi-Fi network. Turn the best VPN for Windows into the best VPN for everyone! VPN servers everywhere Free VPN for Windows will never offer fast and secure global servers. CyberGhost VPN offers over 7600 servers in 91 countries, and we're always adding new ones. Hide your IP and appear as if you are browsing the other side of the world with a single click. Securely access your favorite websites and essential services without limitations from home. Bypass network locks and access your favorite streaming service. The CyberGhost VPN app completely encrypts your business, making it impossible for local firewalls to prevent you from keeping your streaming habits comfortable. Watch a video tutorial that explains how to install CyberGhost VPN in Windows FAQ How secure is Windows 10? Windows 10 offers much more security than previous versions. From its updated and improved built-in antivirus to virtualization-based security, Microsoft's latest version is decent. However, we wouldn't say that Windows 10 is perfectly safe. It's even easier for cybercriminals to hack than Linux or macOS. In addition, Microsoft has not taken any notable steps to improve its privacy. If you want to protect your personal information on Windows 10, always connect to a VPN cyberghost when you go online. Does CyberGhost VPN work on both desktops and notebooks? Yes. CyberGhost VPN works on different devices, manufacturers, and operating systems. We don't believe in borders, so we don't impose any. You can have a Dell notebook, a MacBook Air or a homemade PC. If you're using Windows, Linux, or macOS, CyberGhost VPN is probably compatible. Can a VPN increase the connection speed on my PC? Depends on. Your Internet service provider can physically limit bandwidth. If this happens, no software or application can increase the connection speed. However, if your provider limits bandwidth based on your traffic, a VPN can improve your connection speed. CyberGhost VPN encrypts your web traffic, preventing your provider from imposing limitations. Can I use a free VPN for Windows? You can, but you shouldn't. Free VPNs are often malware in disguise. Instead of putting your device and financial data at risk, your best alternative is to buy a paid VPN for Windows, such as CyberGhost VPN. The app includes a 45-day money-back guarantee. Try it and if you are not satisfied, ask for a full refund. It's that simple. Do I need a VPN on Windows? Yes. Windows may be more secure today, but it doesn't protect you from data collection, government surveillance, or man-in-the-middle attacks. To protect your personal information, you need a premium VPN that fully encrypts your online activity. You can also bypass censorship and network blocks, as well as access your favorite websites. CyberGhost is one of the most secure VPNs for Windows. We use state-of-the-art encryption protocols, and our network has multiple layers of security to prevent data breaches. Does CyberGhost VPN keep records? Lol We have a strict no record policy. The CyberGhost VPN network consists only of RAM-based servers, which means that we do not store any data. Every time we restart our servers, all information is permanently deleted from the machines. We are based in Romania, a privacy-friendly country that has no data retention laws and is not affiliated with the Five Eyes alliance. We have received court orders, but we cannot comply with them because we do not have the data to hand over. How do I use CyberGhost VPN on Windows? Log in with your CyberGhost account. Click the \\\\"My VPN\\\\" button on the left and select \\\\"Download VPN\\\\". Click \\\\"Download App\\\\" next to the CyberGhost VPN for Windows option. Run the CyberGhost installer Enter your account details in the app and click \\\\"Sign In\\\\". Click \\\\"Connect\\\\" and you're done! Don't just believe it! Here's what our customers have to say: Choose the plan that works for you Over 7600 VPN servers worldwide Protection of 256-bit AES encryption against DNS leaks and ip Auto Interrupt Key OpenVPN protocols, IKEv2, WireGuard® Strict No Record Policy Bandwidth and unlimited traffic VPN speed possible up to 7 devices Simultaneously protected Windows applications, macOS, Android, iOS and more 24/7 live customer service guarantee, return your money for 45 days Descargar ahora TunnelBear para Windows desde Softonic: Descarga gratis, 100% segura y libre de virus.
