By Justin Beach Conexant HD Audio refers to audio software created by Conexit Systems Inc. of Newport Beach, California. It is used in a variety of Windows-based personal computers, including those made by Hewlett Packard, Conexant Systems, Inc. (NASDAQ: CNXT) was spun-off from Rockwell in 1999. In addition to their head office in Newport Beach, California, the company has design centers in the US and Asia and sales offices worldwide. The company creates "imaging, audio, embedded modem, and video surveillance applications" according to the company's website. In addition to HD audio products for personal computers and audio codecs, Conexant also creates audio and voice-enabled products for computer peripheral sound systems. SoC or System on a chip solutions is another focus of the company. High Definition or HD audio is am Intel chip-set standard, designed to replace the 1997 Audio Codec 97 standard. It was created to be compliant with the audio format used in DVDs, and includes a playback sample frequency of up to 48 kHz according to TopBits.com. By Robert Ceville Realtek audio sound cards feature a graphic equalizer to adjust the sound on your computer to your taste. Because digital audio is now being compressed at different qualities, there is no set equalization that will be ideal for all files. That is why you have to be able to get into the Realtek equalizer to make the proper adjustments. Many Realtek sound card users have reported that their graphic equalizer has disappeared in Windows 7, but restoring it is simple. Download and install the latest drivers from the Realtek website. The company has made the necessary changes so that users can access the equalizer once again with the latest version. Open the Realtek sound card user interface. This will bring you to the screen where you can make detailed settings for the device, and can customize the equalizer. Click on the "Sound Effects" tab. Right beside the equalizer you will see a box that you will have to highlight with your mouse. When highlighted, it will give you the option to "Change To Graphic EQ." Click on that button to activate the Realtek Equalizer for the device. By Michael Butler The Realtek HD Audio Manager is a driver that handles sound playback and recording on many Windows computers. The program has several features, such as equalizers and environmental effects that you can configure for optimal playback. Recording with Realtek HD Audio Manager requires configuring the settings to indicate how you want to record. Plug a microphone into your computer's audio input or microphone jack. Right-click on the Realtek HD Audio Manager icon in the system tray. Select "Sound Manager." Click "Microphone." Adjust the "Recording Volume" slider as you wish. Click "Noise Suppression" to cancel out background noise. Click "Acoustic Echo Cancellation" to prevent whatever you're recording from playing back through your speakers and being picked up by a microphone. These two settings are optional. Select the "Default Format" tab. Select a sample rate and bit rate from the drop-down menu. Click "OK" to close the audio manager. Right-click on the Realtek HD Audio Manager icon again. Select "Sound Recorder." Press the "Start Recording" button to start recording. Press "Stop Recording" to stop or pause. A pop-up window will ask where you want to save the recording. Navigate to an appropriate folder on your hard drive, then press "Save" if you're finished recording. Otherwise, click "Cancel." Press "Resume Recording" when you want to start recording again.
