Home - Interior Amana ovens, like many others, have a built-in locking lever that is used when setting the oven to its self-cleaning setting. The ovens have an internal sensor that keeps the locking mechanism locked until the cleaning cycle is complete. An oven that never completed the self-cleaning cycle may appear to have its lock stuck leading to an erroneous idea that the mechanism itself is faulty. Consult your Amana oven owner's manual or instruction manual about the self-cleaning function of your oven. At this point, you can choose to allow the oven to complete its self-cleaning cycle, which will permit release of the locking lever when finished, or you may proceed to the following steps. Turn off all dials of the oven and unplug the unit. Alternatively, turn off the circuit breaker switch connected to the outlet being used for the oven. Keep power removed from the oven for about five minutes. Before restoring power to the oven, try to unlock the oven by sliding the lever in the direction necessary to unlock, according to your oven owner's manual. If it unlocks, restore power to the oven. If it doesn't unlock, restore power to the oven and try once again to unlock the oven. If you are still unable to unlock the oven after following all of these steps, consult a certified Amana technician as the locking mechanism contains no user repairable components. Access to oven power cable Access to the circuit breaker switch leading to the oven's wall outlet Oven instruction manual Never attempt to force the locking lever left or right using brute force or tools. Doing so will bend or break the internal linkages connected to the lever, requiring professional repairs. The lock feature shuts down the control pads (buttons) and locks the oven door to avoid unintended use of the oven.

The lock feature is preset unlocked, but can be locked.

If the oven is currently in use, the controls and oven door cannot be locked.

Before locking, make sure the oven and Timer are off.

Touch and hold START/ENTER for 5 seconds.

A single tone will sound, LOC will appear on the display.

LOC will also appear whenever any command pad is pressed while the control is locked.

Repeat to unlock.

LOC will disappear from the display.
